## Project

### Opportunity

Celonis London, a leader in Enterprise Performance Acceleration software, required a seating solution to accommodate 20+ people for presentations and training purposes. Forward thinking, they required a freestanding furniture solution, flexible enough to be able to move to another office when they outgrew the current space.

### Solution

**Tier** by Connection was specified to create the presentation and training space. Specified in a central location within the office space Tier helped to define a two-tiered workspace; the auditorium seating defined for presentations and huddle meetings and the back of the Tier structure specified with whiteboards creating an impulsive brainstorming and planning area.
