

Belfast Airport Project

Belfast Airport Project

Opportunity

Cited as the UK and Ireland's most convenient airport, Belfast City airport's upgrade was designed to deliver an enhanced airport experience that truly caters for the needs of passengers using the airport.

Approximately 1.4 million departing passengers travelling through Belfast City Airport every year can access the brand new 'business class' facilities in the departures lounge with the launch of a new experiential, luxury seating hub designed by The Alpha Group.

Muse privacy booths

Belfast Airport Project

Solution

The Alpha Group transformed part of the main departures lounge with comfortable, ergonomic and stylish furniture, offering charging points, enhanced lighting and more private seating options for passengers who are seeking quiet spaces to work or simply relax in before travelling. Connection furniture was specified to create a composed working and social environment in which passengers can sit, relax, work and 're-charge' before flying.

Muse privacy booths were specified to create places of focus and privacy within the lounge through the absence of walls. Designed with a utilitarian aesthetic, **Tubes** benches were used to create touch down spaces for temporary working and waiting areas and high back **Tryst** booths were used to facilitate professional and social spaces with visual and acoustic privacy.

Cliona Arthur, Media Sales Manager from Belfast City Airport, said: "We understand that 'out-of-office' doesn't always mean that business stops, and that connectivity on the go is vital for our passengers. The experiential luxury seating hub will further strengthen the comfort and convenience we provide for our passengers and will be the perfect 'fit' for our airside environment."
